Dot .Net Core and Progressive Web Application Practical

Practical – II

Roll No.:T039	Name:Bhavesh Ramakant Salaskar
Class:TYIT	Batch:1
Date of Assignment:09-07-2026	Date/Time of Submission:09-07-2026

a) Function Overloading

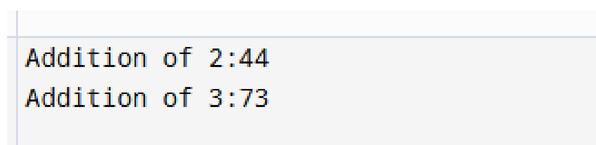
Code:

```
using System;

public class ABC
{
   void Add(int num,int num1)
   {
      Console.WriteLine("Addition of 2:"+(num+num1));
   }
   void Add(int num,int num1,int num2)
   {
      Console.WriteLine("Addition of 3:"+(num+num1+num2));
   }
   public static void Main(string[] args)
   {
      ABC obj = new ABC();
      obj.Add(18,26);
      obj.Add(18,26,29);

   }
}
```

Output:



b) Constructor overloading

Code:

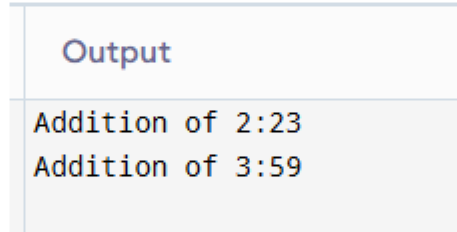
```
using System;

public class ABC
{
   ABC(int num,int num1)
   {
```

```
        Console.WriteLine("Addition of 2:"+(num+num1));
    }
    ABC(int num,int num1,int num2)
    {
        Console.WriteLine("Addition of 3:"+(num+num1+num2));
    }
    public static void Main(string[] args)
    {
        ABC obj = new ABC(11,12);
        ABC obj1 = new ABC(11,12,36);

    }
}
```

Output:



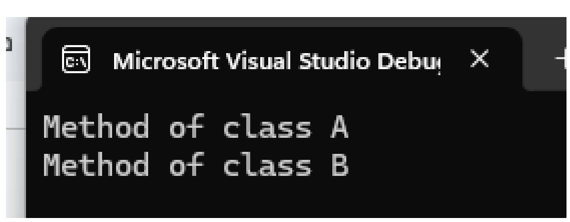
b) Inheritance (all types)

Code:

```
using System;

public class A
{
    public
    void Fun1()
    {
        Console.WriteLine("Method of class A");
    }
}
public class B:A
{
    public
    void Fun2()
    {
        Console.WriteLine("Method of class B");
    }
}
public class ABC
{
    public static void Main(string[] args)
    {
        B obj = new B();
        obj.Fun1();
        obj.Fun2();
    }
}
```

Output:

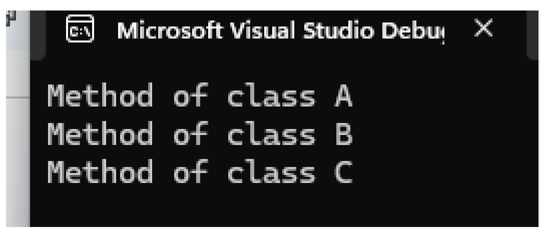


Code:

```
using System;

public class A
{
   public
   void Fun1()
   {
      Console.WriteLine("Method of class A");
   }
}
public class B : A
{
   public
   void Fun2()
   {
      Console.WriteLine("Method of class B");
   }
}
public class C : B
{
   public
   void Fun3()
   {
      Console.WriteLine("Method of class C");
   }
}
public class ABC
{
   public static void Main(string[] args)
   {
      C obj = new C();
      obj.Fun1();
      obj.Fun2();
      obj.Fun3();
   }
}
```

Output:



Code:

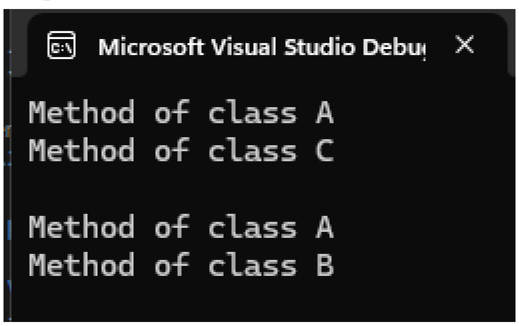
```
using System;

public class A
{
   public
   void Fun1()
   {
      Console.WriteLine("Method of class A");
   }
}
public class B : A
{
   public
   void Fun2()
```

```
    {
        Console.WriteLine("Method of class B\n");
    }
}
public class C : A
{
    public
    void Fun3()
    {
        Console.WriteLine("Method of class C\n");
    }
}
public class ABC
{
    public static void Main(string[] args)
    {
        C obj = new C();
        obj.Fun1();
        obj.Fun3();

        B obj1 = new B();
        obj1.Fun1();
        obj1.Fun2();
    }
}
```

Output:



Using interface

Code:

```
using System;

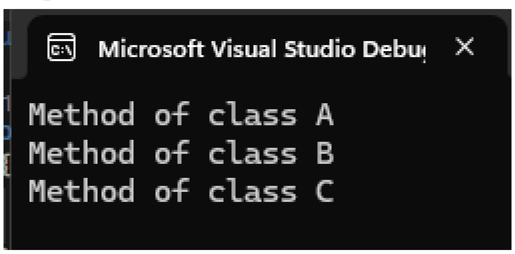
public interface A
{
    public void Fun1();
}

public interface B
{
    public void Fun2();
}
public class C : A,B
{
    public void Fun1()
```

```
    {
      Console.WriteLine("Method of class A");
    }
    public void Fun2()
    {
      Console.WriteLine("Method of class B");
    }
    public
    void Fun3()
    {
      Console.WriteLine("Method of class C\n");
    }
}
public class ABC
{
    public static void Main(string[] args)
    {
      C obj = new C();
      obj.Fun1();
      obj.Fun2();
      obj.Fun3();

    }
}
```

Output:



e) Using Delegates and events

Code:

```
using System;

public class ABC
{
   public static void Add(int a, int b)
   {
      Console.WriteLine("Addition = " + (a + b));
   }

   public delegate void MyDelegate(int x, int y);
   public static void Main(string[] args)
   {
      MyDelegate obj = Add;
      obj(10, 20);
```

```
    }
}
```

Output:

```
Output

Addition = 30
```

f) Exception handling

Code:

```
using System;

class ABC
{
    public static void Main(string[] args)
    {
        try
        {
            int a = 10;
            int b = 0;

            Console.WriteLine(a / b);
        }
        catch (DivideByZeroException)
        {
            Console.WriteLine("Cannot divide by zero.");
        }

        Console.WriteLine("Program Ended");
    }
}
```

Output:

```
Output

Cannot divide by zero.
Program Ended
```
